Worst-case requirement and observed requirement
bound $2d_{hi}\Delta t$ (Eq. 16)
exact worst case $2d_{hi}\Delta t - R\Delta t^2$
smallest safe $\bar{\mu}$, ramped drought
smallest safe $\bar{\mu}$, abrupt drought
protection margin $\bar{\mu}$ [kWh]
EMS period Δt [h]
Energy cost of the margin (ramped drought)
$\bar{\mu} = 2d_{hi}\Delta t$
state-dependent trigger
smallest safe $\bar{\mu}$ (hindsight)
dispatchable energy [kWh]
EMS period Δt [h]
